

PERFECTION
Lens Series

The new Perfection Lens Series is by far the most advanced range of free form lenses available on the world market. Complex calculation algorithms combined with the world-class manufacturing technologies provide the most precise and accurate lenses ever seen.

In the pursuit of excellence, we wanted to challenge traditional processing methods and push the boundaries to create a new generation of innovation. We partnered with industry leaders and challenged them to redefine "what's possible" - the result which is the future of optics.

These lenses are simply the best we can make and brings together modern design, advanced manufacturing, original thinking and our passion to ensure you have the most comfortable and amazing wearer experience that is available.

PERFECTION
Lens Series

PERFECTION **EVERYDAY WIDE** ▲

The go to lens for seasoned progressive lens wearers, the Everyday Wide has a fast adaption rate with super wide near and intermediate zones.

PERFECTION **EVERYDAY** ▲

Brilliant for first time wearers - a superbly balanced lens with fast and easy adaption. Featuring smooth, soft power gradients which results in a higher level of visual comfort.

PERFECTION **TASK** ▲

Working Distance 0.4 – 4m
A perfect solution for boardroom and classroom environments, the Task lens incorporates smooth wide fields of view in both intermediate and near zones.

PERFECTION **DEVICE** ▲

Working Distance 0.4m – 2m
As the name suggests, ideal for the constant device user and office desk environment. Hobbyists will also love the Device lens, as it offers unparalleled fields of view in both near and intermediate zones.

FREE FORM SINGLE VISION

SINGLE VISION **DIGITAL**

The most accurate Single Vision lens on the market which incorporates a special panoramic calculation process to provide ultra-crisp visual comfort like no other.

SINGLE VISION **SPORTZ ACCURACY**

The ultimate in Single Vision performance lens for a sports active lifestyle, the SV Sportz lens takes extreme visual performance to whole new level. The Accuracy Calculation process takes into consideration wrap angle, base curve, pantoscopic tilt and back vertex distance to optimize viewing without distortions.

THE **ACCURACY CALCULATION**

The Accuracy Calculation is offered as an additional process that allows you choose a true tailor-made lens experience. The calculation takes into consideration the unique features of your chosen frame - wrap angle, base curve, pantoscopic tilt and back vertex measurements.

* Accuracy Calculation is included with ALL Single Vision SPORTZ lenses and available as an add-on extra on other suitable lens designs.
